

Timeline: September 12 – October 31, 2018

Project Summary: In anticipation for winter conditions and to invest in important infrastructure, the City of Aspen will be working on upgrades to increase safety for pedestrians, enhance stormwater systems and update the bus stop at Main Street and Galena Street.

Key Features:

- Bus Stop Improvements
- Replace Existing Sidewalk and ramps to meet ADA Standards
- Stormwater Improvements
- Permeable Paver Installation
- Curb and Gutter Improvements
- Snowmelt
- Painted Crosswalks

Work Activities: Demo of sidewalks, roadway, curb and gutter, trenching activities, sawcutting, utility work, masonry

Traffic Impacts & Detours: Pedestrian and business access will remain open. It is expected that both westbound lanes will remain open for the duration of work. Both eastbound lanes will be open for the majority of the work, but there will be periodic right lane closures for construction access. Trenching activities along the west side of Galena Street from Main Street to Hopkins Avenue will require periodic alternate routing. Follow signage and flagger instructions.

Parking will be closed on the east half of the south side of Main Street between Mill and Galena. In that section the curb, sidewalk, a bit of the roadway and part of the gas station lot will be under construction. Please note that this project is occurring concurrently with the Castle Creek Bridge / Hallam Street Improvement Project.

Contractor: Excavation Services, Inc.

Cost & Funding: \$214k from Engineering Planned Projects/General Funds
